Consent to Participate in a Non Biomedical Research Mother and Health Survey in Indonesia

Introduction

My name is _____ from SurveyMETER. We are doing a study called the Transparency for Development with researchers from Harvard University, the Results for Development Institute, and the University of Washington in the United States.

Benefit of this study

The benefit of this study is to learn about maternal and under 12 years-old child health in your community, and your answers will help the researchers evaluate how certain programs could help improve the health of mothers and babies in communities like yours. As a participant, you will be asked a series of questions related to your household and your experience with maternal and newborn health services. Additionally, with your permission, we would like to take measurements of your most recent child. If you agree to participate, we will ask you questions for about 1,5 hour. Your child(ren)'s participation will take approximately 15 minutes and will involve measuring their height with a tape measure and weighing them on a scale.

Participation is voluntary

You don't have to participate in the survey, but we hope you will agree to answer our questions since your views and experiences are very important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time. Refused to participate or stopping your participation will involve no penalty to you or your household.

Confidentiality

We will take measures to keep all personal information collected confidential. We will remove your name and your child(ren)'s name from the answers and give it a code, but there is a small chance that someone could find out your name. We will take every precaution to prevent this from happening, and your name (s) will not be listed in any report that comes out of the survey. Your answers may be anonymously combined with the answers of other women and children in your community to calculate the average rates of utilization of key services and the barriers to update of those services. This data may be shared with other members of the community who are working to improve the quality and utilization of health services.

Risks

There are minimal risks from taking part in this survey. If you have suffered from a miscarriage or death of child, questions related to this may cause some physiological discomfort. If any of the questions are too painful to answer, we can skip them or you can choose to discontinue the interview at any point. We do not foresee any risks to your child for their participation in this study.

Questions or Concerns

If you have questions, concerns or complaints, please contact the the survey director for this study, Dr. Ni Wayyan Suriastini who can be reached at at Jln. Jenengan Raya No. 109, Desa Maguwoharjo, Kecamatan Depok, Kabupaten Sleman, D.I. Yogyakarta, phone number (0274) 4477464

Now, will you participate in this study?

1. Yes → CONTINUE INTERVIEW

3. No → END INTERVIEW

Will you allow your children from your last pregnancy to have their height and weight measured?

1. Yes (CHILD IS MEASURED) 3. No (CHILD IS NOT MEASURED)

READ ALOUD: Some women tell us that when they give birth they are treated poorly or with disrespect. We would like to know how common this problem is, so we would like to ask you about your own experiences with childbirth. There are no right or wrong answers to these questions. It is only important to us that we understand your experiences. Nothing you tell us will be linked to your name, your children's names, or the ability of you or your family members to access health care in the future. Some of these questions may be upsetting or stressful. As I said before, you can skip any question you are not comfortable answering.

Now we're going to read you a list of things that sometimes happen to women who have given birth in a facility. For each of these things, please tell me if you have 1) experienced it during your **recent delivery** at this facility, 2) witnessed it done to other women delivering in this facility, 3) heard about it done to other women during delivery at any facility, or 4) none of the above. Please keep in mind we are talking about this delivery and not your past deliveries.

Many parents in the village are concerned that their children are not learning when they go to school, and they think that the school would improve a lot if the teacher would come more regularly and work harder to teach the students well.</p> <p>Now I'm going to describe the situation of three different people who want to improve this situation.</p> <p>For each of them, I would like you to answer the question "how is this person's ability to improve life in their village?"
